

I/O MTUs - S800 I/O

Compact Product Suite hardware selector

S800 I/O is a comprehensive, distributed, and modular process I/O system that communicates with parent controllers over industry-standard field buses. Module Termination Units (MTUs) host S800 I/O modules and are keyed to ensure the correct module is used. Many Module Termination Units (MTUs) options are available for various S800 I/O modules to meet your project requirements.

By permitting installation in the field, close to sensors and actuators, S800 I/O reduces the installation cost by reducing the cost of cabling. And thanks to features such as “hot swap” of modules, “online” reconfiguration, and redundancy options, it contributes to keeping production – and thereby profits – up.

For updated information regarding System 800xA please visit our 800xA Hardware Selector. In the HW-selector, you can compare different communication modules, AC 800M controllers, S800 I/O modules, S900 I/O modules, Select I/O modules, module termination units, networks equipment, panels, power supplies, and voters, and also print your PDF files or save an outline of all modules in the product area.

Below is an outline of the range of different MTUs for S800 I/O modules available.
